Cumulative antibiogram 1998–2025

Large number: % susceptible
n = isolates tested for that drug
(n): first isolates of the organism

Example: public NCBI BioSample isolates (not surveillance data) · CLSI 2025 breakpoints · All years pooled: no single year has 30 first isolates per organism

Gram-negative

	Penicillins			Cephalosporins			Carbapenems		Aminoglycosides		Fluoro-quinolones	Other	
	Ampicillin	Amoxicillin/ clavulanic acid	Piperacillin/ tazobactam	Ceftriaxone	Ceftazidime	Cefepime	Meropenem	Imipenem	Gentamicin	Amikacin	Ciprofloxacin	Trimethoprim/ sulfamethoxazole	Colistin
A. baumannii (361)	IR	IR	22 n = 64	IR	28 n = 303	39 n = 160	50 n = 223	67 n = 338	22 n = 325	46 n = 331	21 n = 357	25 n = 328	n/a* n = 153
E. coli (347)	6 n = 263	35 n = 254	69 n = 254	12 n = 258	34 n = 199	64 n = 249	86 n = 258	81 n = 134	61 n = 271	80 n = 270	17 n = 270	39 n = 270	n/a* n = 81
K. pneumoniae (361)	IR	50 n = 355	53 n = 356	48 n = 356	49 n = 359	8 n = 195	28 n = 196	29 n = 191	40 n = 195	52 n = 195	4 n = 195	16 n = 191	—
P. aeruginosa (400)	IR	IR	23 n = 97	IR	51 n = 259	28 n = 169	28 n = 228	18 n = 145	37 n = 116	76 n = 368	54 n = 338	—	n/a* n = 84

Gram-positive

	Peni-cillins	Amino-glycosides	Fluoro-quinolones	Glyco-peptides	Other					
	Oxacillin	Gentamicin	Ciprofloxacin	Vancomycin	Erythromycin	Clindamycin	Trimethoprim/ sulfamethoxazole	Linezolid	Daptomycin	Rifampicin
E. faecium (136)		IR	*25†* n = 32	*32†* n = 41	IR		IR	—	84 n = 112	—
S. aureus (399)	59 n = 304	80 n = 398	89 n = 327	100 n = 341	60 n = 399	93‡ n = 398	96 n = 396	99 n = 272	*100†* n = 46	99 n = 396

% susceptible >= 90% | 80-89% | 60-79% | 40-59% | 20-39% | < 20% | n/a* no S category | IR intrinsic | — < 30 tested

First isolate per patient and species per 365 days (CLSI M39). Raw MIC and disk values read with CLSI 2025 breakpoints; S/I/R reported by the laboratory kept as reported.
IR: intrinsic resistance (EUCAST Expected Resistant Phenotypes v1.2), not reported. —: fewer than 30 isolates tested. Blank: not tested. † 30–49 isolates tested, wide uncertainty.
‡ Clindamycin: 120 staphylococci are erythromycin R and clindamycin S with no D-test result; inducible resistance cannot be excluded, so % susceptible may be too high.
n/a*: CLSI 2025 has no susceptible category for Colistin; see the CSV tables for % intermediate.
Generated 2026-10-21 by R/02_analyse.R. Public NCBI submissions, enriched for resistant isolates. Not representative of any population and not for empirical therapy decisions.
